

Geoheritage Day Saturday September 29th, 2018
Visit the Earth Science Sample Preparation Laboratory
(ROCKLAB)

The Department of Earth Sciences at Carleton University would like to invite you to visit our Sample Preparation Laboratory during GeoHeritage Day. This will be of interest to anyone fascinated with rocks, minerals, or fossils and in the technology involved in preparing and processing Earth Materials.

When: Saturday September 29th, 10:00am to 3:00pm.

Where: Room 1119 Herzberg [Campus Map](#)

We invite you to bring in an “interesting” rock you would like to know more about. We will provide one cut through the rock and polish one face of the cut surface. The preferred size would be the size of a closed fist (as in rock, paper, scissors).

This is an opportunity to learn more about your pet rock: whether it is sedimentary, metamorphic or igneous, if it contains fossils or what minerals it contains. The colours and textures inside may astonish you! We will have a small supply of interesting rocks for you to choose from the Rocklab if you don't have one of your own. We look forward to seeing you on GeoHeritage Day!!
